Attorneys for Defendants

RAYMOND ARTHUR ABBOTT, et al.,

Plaintiffs,

v.

FRED G. BURKE, et al.,

Defendants.

SUPREME COURT OF NEW JERSEY

Docket No.

Civil Action

**CERTIFICATION OF KATHERINE
CZEHUT**

I, Katherine Czehut, of full age, hereby certify that:

1. I am the Director of Strategy and Analytics in the Office of Charter and Renaissance Schools, Department of Education ("Department"). In this capacity I am responsible for redesigning the accountability system used to evaluate the academic performance of charter schools.

2. I earned my Masters and PhD in Sociology from the Graduate School of Arts and Sciences at Harvard University.

Prior to joining the department in December 2014 I was the founding Director of Research and Evaluation at ROADS Charter High Schools, a network of two, NYC-based alternative charter high schools and a Strategic Data Project (SDP) data fellow.

3. New Jersey's charter school program commenced in 1996 with the enactment of the Charter School Program Act ("CSPA"), N.J.S.A. 18A:36A-1 et seq. The Program was specifically designed to be a laboratory for comprehensive education reform, offering school operators greater autonomy in exchange for greater accountability for student outcomes.

4. In 1997, the first year approved charter schools opened their doors to serve students in New Jersey, there were 13 charter schools serving about 1,350 students in eight districts in New Jersey. Consistent with the intent of the CSPA to encourage charter schools in urban districts, ten of those charter schools were in the SDA Districts.

5. In the 2015-2016 school year, over 41,000 students were served in 89 charter schools statewide. Of those charter schools, 74 enrolled the majority of their students from SDA Districts. See Exhibit A. In total, over 36,000 students from SDA Districts were served in charter schools.

a. Newark is home to the largest number of charter schools in the State. In 2015-16 there were 20 charter schools in Newark serving 14,443 Newark

public school children.

b. Jersey City is home to 12 charter schools that in 2015-16 served approximately 5,035 students.

c. Camden has 9 charter schools that in 2015-16 served approximately 4,862 students.

6. In 2016-2017, it is anticipated that 3 more charter schools will be open to serve students from SDA Districts: Cresthaven Academy Charter School serving a maximum of 75 Kindergarten students from Plainfield; Hudson Arts and Science Charter School serving a maximum of 360 K-5 students from Kearny and Jersey City, and Philip's Academy Charter School of Paterson, serving a maximum of 54 Kindergarten students in Paterson.

7. The Department continues to encourage the establishment of high quality charter schools in high needs communities including SDA Districts that do not yet have a charter option for students.

8. New Jersey's approval process for new charter schools is rigorous. The Department accepts applications two times per year. As set forth in N.J.A.C. 6A:11-2.1(b)2, the application itself consists of two phases. For each phase, the Department releases detailed criteria to ensure that applicants understand reviewer expectations. Since 2011, the Department has utilized external reviewers, who are charter school experts, on its

review teams to ensure that a rigorous process is maintained. All interested parties are invited to submit a phase one application. The phase two application is by invitation only; it is reserved for applicants whose phase one applications receive approval. After review of phase two applications, applicants may be granted a 90-minute capacity interview. Beginning in 2015 that interview has included a performance task, which has applicants work through a real-life scenario and demonstrate knowledge in a critical area based on any perceived gaps in the application. While applicants may receive approval to open in the school year following the capacity interview, charters are not granted until approved applicants complete a "preparedness review" and meet certain criteria as set forth in N.J.A.C. 6A:11-2.1(i). It is not unusual for the Department to approve fewer applicants in a given year than are declined. For example, 22 phase one applications were reviewed in the March 2015 round and only one phase two application was approved. Further, not all applicants that receive approval after phase two are granted charters. In July 2013, for example, only 6 applicants with approved phase two applications were granted charters after 10 were visited for a preparedness review.

9. The charter renewal process is also rigorous. Pursuant to N.J.S.A. 18A: 36A-17, the Department conducts a comprehensive, in-depth review of a charter school to determine

whether to renew the charter for an additional five years. All charter schools in the renewal process must submit a renewal application to the Department. Subsequent to the review of the application, the Department conducts a site visit and structured interview with the board, its administration, and stakeholders. To strengthen the integrity of the review process, in 2012 the Department began to include external reviewers in the renewal process. These reviewers participate in the site visits, collate observations and prepare summary evaluations.

10. The Performance Framework, which includes Academic, Financial and Organizational sections, is used as a guide and rubric throughout the renewal process to assess the performance of the charter school. Within the Performance Framework, the Academic section carries the most weight in all high-stakes decision making. Additional information is also considered during this process including but not limited to: charter school annual reports, monitoring visit results, annual audits and other financial reporting. The findings from the in-depth review of these materials contribute to the recommendations made to the Commissioner for a final renewal decision.

11. In addition, because the grant of a charter is of a finite duration (4 years for initial charter and 5 years for each term thereafter), the Department has oversight and monitoring functions of each charter school and the ability to

put a charter school on probation, summarily revoke a charter, or not renew a charter at the end of a term.

12. Generally speaking, charter schools serving predominantly students from SDA Districts ("charter schools") tend to outperform SDA District schools ("district schools") on various performance metrics. For example, on the 2014-15 Partnership for Assessment of Readiness for College and Careers (PARCC), 40 of 45 charters schools serving the middle school grades (grades 6, 7 and 8) outperformed the average across district schools serving the same grades in English Language Arts and 35 of 45 did so in Math. Among charter schools serving the elementary grades (grades 3, 4, and 5), 51 of 57 outperformed the average across district schools serving the same grades in English Language Arts and 46 of 57 did so in Math. Exhibit B

13. The attached Exhibit C shows the proficiency rates in Language Arts and Mathematics in Grades 3, 8 and 11 and average budgetary per pupil costs over a time period ranging from 2004 to 2015 in charter schools compared to the SDA District from which the charter schools enrolled most of their students, and to statewide figures. For example, the chart "2004-15 Grade 3 Proficiency Rate in Language Arts and Average Budgetary per Pupil Costs" for All SDA Districts tells us that, from 2004 to 2015, the average budgetary per pupil cost across the SDA

Districts has been higher than the statewide average. It also indicates that the average budgetary per pupil cost across charter schools that enrolled the majority of their students from SDA Districts has been similar to the statewide average over the same time period. In terms of proficiency, the chart tells us that, from 2010 to 2013, the percent of third grade students who achieved proficiency in Language Arts as measured by a state test increased in both the SDA Districts and charter schools that enrolled a majority of their students from SDA Districts, although the gains were greater among charter school students. Additionally, the proportion of charter school students achieving proficiency continued to increase into 2014, when the focus of the state test shifted to the Common Core State Standards and as a result was considered to be more rigorous. In all three groups the percent of students achieving proficiency declined in 2015, as was expected with the introduction of the more rigorous PARCC assessments.

- a. The second chart, "Disparities in Grade 3 Proficiency Rates in Language Arts and Average Budgetary per Pupil Costs at Charter versus District Schools 2004-15" underscores the differences in proficiency rates and per pupil costs between charter schools serving mainly SDA District students ("charter schools") and traditional public schools

in SDA Districts ("district schools"). On this chart, the blue bars show the size of the difference in proficiency rates between charter school students and students in district schools with positive values signaling higher proficiency rates among charter school students. As the chart displays, the magnitude of the difference in the percent of students achieving proficiency at charter schools compared to their district school counterparts has been increasing since 2009. In 2009, only 1.6% more charter school third grade students than third grade students in district schools achieved proficiency on the state test in Language Arts. Yet by 2015, when the state test was more rigorous, the size of the difference had grown to 18.1%. The orange bars on the chart illustrate the difference in per pupil spending (in thousands of dollars) between charter schools and district schools. For these bars, negative values signal smaller per pupil costs at charter schools compared to district schools. This chart tells us that in the time period 2004 to 2015 charter schools on average have spent less each year than district schools on average, although the gap has narrowed since 2008.

14. Attached hereto as Exhibit D is a report for North Star Academy of Newark's middle school grades (grades 6-8), which sets forth performance data specific to this school. The report compares North Star's performance to that of all public (i.e., district and charter) schools in Newark District, to all schools in its Similar School Group, and to all schools across the state. The report tells us, for example, that North Star's proficiency rate on the 2014-15 ELA PARCC tests exceeded 94.3% of all District schools, is No. 1 (100%) in its Similar School Group, and exceeded 84.4% of all schools in the state. The second page of the report provides the names of all schools in North Star's Similar School Group.

15. Generally speaking, a charter school receives approximately 90% of the sum of the budget year equalization aid per pupil and the pre-budget general fund tax levy per pupil, adjusted for inflation. Charter schools also receive from resident districts some categorical aid as well as federal funds attributable to the student. Charter schools that operate preschool programs receive 100% of preschool education aid.

16. Exhibit E shows the demographics of charter schools in SDA Districts as compared to schools in SDA Districts, non-SDA Districts, and Statewide.

I hereby certify that the statements made by me are true.
I am aware that if any of the foregoing statements are willfully
false, I am subject to punishment.

Dated: September 14, 2016

Note: Math test results for Grade 7 include the scores of 7th grade students on any of the following math tests: Math 7, Math 8, Algebra 1, Algebra 2 and Geometry.
 For Grade 8 scores of 8th graders on the following math tests were included: Math 8, Algebra 1, Algebra 2 and Geometry.

THE SIMILAR SCHOOL (SS) GROUP Which public schools serving grades 6-8 are similar to this school based on academic starting points?

Three characteristics are used to determine academic starting points: 1) the average (mean) 5th grade LAL and Math scale score, 2) the percent of students with disabilities (SWD) and 3) the percent of English language learners (ELL) enrolled in grades 6-8.

Note: To take into account differences across years and state tests, all scale scores were transformed into standard scores with a mean of 500 and a standard deviation of 100.

See the Guidance document for more details.
